

I think that being in Techsploration would be a great chance for me to be able to learn about jobs that are usually geared towards men and it would also be an amazing opportunity. My sister, Twana Hiltz, was in Techsploration when she was in grade nine two years ago and she had a lot of fun and thought that it was a great experience, so I am really interested in joining as well. I would like to be in my school's Techsploration team because I am really interested in math and science; it would improve my skills that I could need for a future workplace and it would inform me on some potential jobs for me that I don't know much about.

My two favourite subjects in school are math and science and I am very interested in getting to know about everything that has to do with these two topics. In addition, I would really like to have a career that involves one or even both of those subjects. Those types of careers usually aren't geared towards women, so we tend to not be exposed to all of those options that we have as well, which means that we don't really know that much information on those. If I was accepted into Techsploration, I'd be able to get an in-depth look at many different jobs that I could do that involve science, trades and technology.

Techsploration would be a fantastic opportunity for me to be able to widen my horizons and improve my skills in a variety of areas. By doing some of the hands-on activities that Techsploration offers, I could develop new skills that would be very beneficial in most workplaces. Some of the areas that those skills could be in include: teamwork, leadership, computers/technology, presenting, and communication. Learning these would also help me understand what types of talents professionals need to complete the everyday tasks in their workplace that I would need to learn how to do in order to take up one those occupations. Consequently, Techsploration would help prepare me on how to do different jobs and it would look good on future applications.

By being a part of Central King's school team, I could expand my mind by being introduced to the facts and details of multiple careers that I could take up that I wouldn't necessarily have even considered. It would be really fun to get to know all of my choices when it comes to the careers that Techsploration offers information about, and meeting new people and seeing what activities their day consists of. By getting to know these options, I could help educate other girls who may want to take up a career in the trades, etc. to try to increase the number of girls that go into these fields even further. This could bring new ideas and skills into these occupations, which could potentially really benefit them and our economy.

In conclusion, I would really like to be accepted into my school's Techsploration team, because I love math and science and want a career based around those, it would teach me new skills that I would need for future occupations, and it would give me more information on different occupations that I may not have even thought of as an option. I'm still undecided on what career I'd like to have and Techsploration would help me decide which one I'd like to pursue. Not only would it increase my knowledge on jobs that are traditionally for men, but it would also look good on future resumes. I think that Techsploration would be a really fun and enjoyable experience and I would love to be a part of this year's group.
