

As a young woman, I want to become involved in Techsploration because of the opportunity given to explore different career options. This experience may even inspire me to choose a career trade. It will also let me meet new people, and to learn more about different working environments.

When I was young, I remember hearing that males and females do not have the same chance in many different things. However, I disagree with this statement, and truly believe that women are capable of doing anything that men are able to do. Perhaps this has inspired me to strive to the best of my ability, and to become a future leader.

Some of my personal interests include reading novels, learning about science, and incorporating physical activity into my lifestyle. Also, some of my hobbies include playing basketball, spending time with family and friends, and participating in a school band where I play the trumpet. I haven't yet decided what my career option would be but I would enjoy working in medical sciences. I am hoping that Techsploration gives me the chance to make a better decision and to help me become aware of some of the career options that I may choose.

I have always been an active volunteer in my community and have been involved in numerous events such as powwows and community gatherings. I currently have been volunteering for the Santa Clause Parade annually, and walks such as the run for the cure, and the Parents against Drug Walk. The extracurricular activities that I am involved in include the high school basketball team and NADACA peer helpers, which allows us to read and present workshops to children in my school.

I've heard about Techsploration through my two eldest sisters, Karlee and Kalolin Johnson who participated as well as my cousin, Kirsten Denny. They've always encouraged me to become a part of it since it was a great learning experience for them.

Some role models I'd like to meet are: someone who is involved in the Medical or Science field, an Engineer or perhaps a pilot. However I would be grateful to meet any role model from a wide variety of fields, since I am still not aware of all the career options that are available. It would be very exciting to get to talk to one of them and learn more about their career and what they love most about doing that.

In closing, I would just like to say that Techsploration would be a great opportunity to meet new people, interact with my peers, and a fun way to learn more about careers and trades. Overall it would be a very educational and good experience, which I would stay committed. This means that I would be present at every meeting, and meeting the criteria that is supposed to be met.
